

Water Smacker Instructions (updated 2/10/20)

Welcome to your new smacked water world. Please read all the way through these instructions, before starting your first charged water bottle. We include a 48 oz. or 50 oz. clear plastic PET, lab grade, non-toxic bottle. PET plastic is lab/medical grade (ISO standard) and will NOT bring any petroleum chemicals into your water. Just do not place in the sun, UV can cause chemical changes, if in the sun too long. You can also smack other 32oz to 52oz. PET plastic water bottles purchased at the local market. Look for the PET or PETE print in the plastic on the bottom of the bottles, along with a triangle with a 1 inside (recyclable). Go buy some extra charge bottles. Some good bottles are Trader Joe's 50.7oz, alkaline water blue bottle. Smart water bottle 50 oz. Evian tall 1.5L bottle. Crystal Geysers Spring Water 1.5L bottle, from the Dollar Store. DejaVu blue 48 oz. bottle. Purchase 3 or 4 for back up charge bottles. PET clear plastic has the correct dielectric properties. It will read PET or PETE stamped in the plastic on the bottom of the bottles. Too thick of plastic (1/8") will not work. No glass, aluminum or stainless flask or any metal will NOT work. The Water Smacker will last many years to come, if you NEVER put a metal (stainless steel) container in the resonant chamber, it will short the WS! Glass works but can and will eventually short the WS unit and VOID the WARRANTY. PET plastic has the correct dielectric properties for the Water Smacker's resonance chamber to work properly. Pouring smacked water into a metal canteen, flask, will discharge the water quickly, also boiling the water for tea or coffee will take out the charge and turn the micro sized water back to macro size water. Many are concerned about PET plastic, as being toxic petroleum product, but is only in danger when expose to sunlight for long periods full of water. PET was designed (1950's) to carry water, juices for drinking. The clear PET plastic bottle we send with the WS unit, is designed for beverages and does not contain any petroleum residues. Some sensitive people smell plastic the first charge, if this is the case pour out and do another 24 hour charge. It will go away and never come back after the first few charges.

Start by charging your water bottle for 48 hours. (24 hours with a Dual Powered PRO model Water Smacker) Get into the habit of changing out charge bottles every morning or evening. Put the charged bottle with cap into the refrigerator and start another charge bottle every 24 hours, a daily routine. Good for 2 people to get plenty of charged water per day. The charged bottle of water will stay charged for about 2 months. If you pour the smacked water into another glass or plastic bottle the charge will decay in 3 days and the micro water will go back to macro size molecules.

HOW TO CHARGE THE WATER FASTER

After the first charge of 2 days with a standard WSer, pour out 8 oz. or 16 oz. of smacked water into your drinking glass. Immediately fill back up the charge bottle, with new water and re-charge again. Do this as a habit. Pour out a glass and fill it back up to 1" to the top of the bottle. Keep the charge going 24/7. Once it is 1/2 full of water the bottle will charge faster! In 2 to 4 hours later the newly filled bottle will have a good charge to it. It only takes 2 watts of power to run! Leave it on 24/7, for a total of 48 watts of power per 24-hour day. Now you can charge the water with a spark in 8 hours time, but a full 24 hours, fully micro clusters the water for full benefits.

If you ordered a "Dual Powered PRO Model WATERSMACKER" the charge time is basically twice as fast. It's operation is the same as a standard Water Smacker.

BEWARE! Do not drink from the “charging bottle” after charging over night it will shock your lips with a static charge! One reason why we call it the Water Smacker. If you put your finger in the water it WILL SHOCK YOU! BEWARE, pour the charged water into a drinking glass or another plastic bottle or cup. This is one way to know your unit is working, by getting a shock with your finger, when you touch the water, it will not hurt BUT WILL startle you!

WATER TYPES 1) Store bought bottled spring water works the best with the Water Smacker. (Crystal Geysler, Deer Park, Fuji and Evian were the best, before smacking. 2) Corp. bottled purified water (R.O filtered water) from Coke (Dasani) and Pepsi (Aquafina), Smart Water, they all have chemical additives for taste. They include salt, magnesium sulfate, potassium chloride. Smart Water (glacier water from NY?) it had a ph of 6.0 and it only went up to 6.8ph in a 24 hour period? And tasted strange. Deer Park Spring water had the highest pH lift after smacking the water. Bottled spring water is better in pH rise, than filtered bottled water. Aquafina, Dasani water the pH does not go up high?, but still shocks you and will still raises your body’s fluid pH level! Focus on a 2 week later body pH blood or saliva test. We cannot control the chemicals in the water and pH rise. Some store bought water, add salt for taste and the cheap bottles taste like plastic. Oil Corps and soda drink corps. Are into selling you drinking water. We do not trust them, they follow the Agenda 21 and 30 eugenic program.

You can do a pH test (before and after, being smacked for 24 hours) and a before and after taste test, on the store bought bottle of water or spring/well water, or R.O filtered water. Before and after the charge. Types of water to use with the smacker is below. They are suppose to bottle the water at 7.0 pH, but shelf life at the local market can be 6 months and the water will lose the ph to more acidic level. Store bought “pH Reagent” test drops, pour 2 tablespoons of the drinking water (10cc) into a glass and use 2 to 3 drops and mix/shake and notice the color, to the chart below. Next charge the water and test in 8 to 48 hours from now. (over night) You will see the pH go up .5 to 1.5/2.0 units up. (6.0pH to 7.0/8.0 pH), if you leave it for another day, the pH reading will go up more .5 to 1 level more.

2) Distilled Water or Reverse Osmosis filtered water. Distilled water loses all chemicals and metals, but still contains the [ORMUS](#) elements, monoatomic gold, silver and platinum metal groups in a sub atomic spin state. Smacking distilled water brings LIFE back into filtered distilled water and enhances the ORMUS elements! It brings back the natural frequency of the Earth into your water a low sub bass tone, below our hearing range. This mellows out your body, the best resonance to drinking water for all life on earth. Berkie filtered water is another good water to smack.

3) Tap Water - Avoid tap water, unless you get a 5 stage Osmosis under the sink water filter system, [\\$200](#) We sell them in our store and our replacement filters only cost you \$15.00 per set of 3. \$75 for al 5 filters. The 3 poly and carbon filters you change out more often. Sears charges \$90 to replace one filter. Change out once a year. Chemicals in the water is what you want to get out. Iron is OK and takes a charge faster. No one drinks straight tap water anymore, unless you live in the mountains or tropical island. Stay away from chemical water. A before and after taste test will tell you a lot. It should taste better than before. If it tastes strange after the smacked session, then do not drink this water. Any chemicals in the water may go worse that before. Your own taste buds will let you know the water is bad. Pick another source of drinking water. The water tastes better, because the 7.5 hz Schumann frequency is in the water, just like nature. Like it just came out of the ground. We erase the memory of the water, during the smacking process.

4) Spring water from a well is best for raising the pH after smacking your water. What ever is alive in the water will stay alive with smacked water. Smacking your water will not kill the microbes in the water. A before and after taste test will tell you a lot. It should taste better than before. A lot of spring water has ORMUS in the water. Learn about [ORMUS](#).

Do a taste test, before and after with 2 glasses of water. Smacked water the water molecules are now micro clustered sized and more silkier feeling on your tongue, the smaller micro hydrogen molecules will absorb into your cells faster and quench your thirst better! Smacked water will also taste better! Over night charge of 8 to 48 hours. Two days give a stronger shock to your finger touching the water in the plastic bottle. The static spark jump from the water to your finger is because of higher pH charge to your acidic body. After many months of drinking smacked water, your body pH will get 7.0pH and the finger into the water bottle the spark shock may go away, due to the water is 7.0pH and your body is now 7.0pH. Your body is all charged up and no spark jump. If this is the case have a friend put his or her finger in the bottle to test if it is working or not? Laugh out loud (lol) We call it the “acidic spark jump”

Traveling with your smacked water. The smacked water will stay more charged in the charging bottle. You can pour the water into your travel canteen, it keeps a charge for 3 days, but gets weaker as the days go by. Best to drink right away to get the full effects. Read the .pdf file [“Negative hydrogen for positive health”](#)

We recommend to use water from a R.O filtered water (reverse osmosis) or your own spring water. We sell a 5 stage RO unit for [\\$200](#), the yearly replacement filters only cost \$15.00 Watch out cheap RO water units charge \$100 to replace one filter. The complete 5 filters replacements cost \$75. Charge your water continually. Tested spring/well water is another good source, if your water does not have to many contaminants, the charge will only increase the contaminants! Filtered spring/well water is best. Another way to make distilled water is with a homemade SOLAR WATER DISTILLER. Learn to make clean drinking water from contaminated water by condensation under window glass. DO NOT USE MUNICIPAL TAP WATER!!! It contains chorine and fluoride and other chemicals that can increase in toxicity, with the smacker.

HUMID HOT CLIMATES

Condensation inside the Water Smacker can be heavy in humid hot climates, when not in use, lay WS on its side to dry out. Some hot climates you have to dry it out after every 24 hour time of smacking. Some have drilled 2 more holes in the top coupler the same height as the hole we have now. To allow more air flow inside the chamber. More holes will not affect the resonant chamber inside. Some have smelt an ozone smell from a wet climate, Do not worry the ozone is negatively charged and not bad to breathe. Positive ozone is what is bad for health.

NEON LAMP TEST

We include a NEON test lamp with each WS sold. Do NOT touch the Stainless rod and the inner aluminum shielding inside the tube, while ON, at the same time, it will give you a good static shock. The WATER SMACKER was designed to work for years to come. We have provided a NEON test lamp, to test if your Water Smacker unit is working or not. Turn on the WS, and flip the unit, without a bottle inside, turn upside down so you can view the stainless rod. The two wires coming off the test neon bulb is non-polarized, which means, it does not matter what end you use. Take one side of the neon bulb bare wire and touch it to the aluminum inner lining, with your thumb. Take the other end of the neon bulb wire, with your other hand and hold onto the wire insulation and get the bare end close to the stainless steel rod. Once it gets about ¼” to 1/8” away from the rod you should start to see blue sparks and hear a buzz

and the neon lamp starts to glow. It is OK to touch the SS rod, it will not short the unit. This test shows you the WS is functioning properly if you see the blue sparks and buzz and the lamp glow. You can also test the lamp with just one finger holding onto the one bare wire between 2 fingers and the other end of the other wire close to the SS rod. You can touch the ss rod with the wire, it will NOT short out the unit. Now if you want to see a bigger spark and more of a lamp glow, take off your rubber sole shoes. You will be more grounded and the neon lamp will glow brighter. The earth is apart of the non-hertzian circuit. DO NOT INSERT ANY METAL OBJECTS INSIDE THE RESONANT CHAMBER WHILE ON OR OFF! IT CAN SHORT OUT THE UNIT and voids the warranty. The neon lamp glow will show the unit is working and ready to smack some water.

For cancer patients, drinking high pH, smacked water will raise your body's pH and a high pH body will prohibit cancer from growing. Cancer will only grow in an acidic body. Many with cancer have been cured or stopped the cancer growth from drinking charged, alkaline, micro-clustered smacked water.

We have to claim, this is [NOT A MEDICAL DEVICE](http://watersmacker.com/terms.html). <http://watersmacker.com/terms.html>

If the green led light does not come on, you need a new wall wart transformer. We will replace in a 2-year period. Any 12v wall wart with a 3 prong plug, 2401/120v to 12v DC transformer x .5 amp to 2 amps will work, but cannot be over 12.5v. A 3 prong grounded wall wart transformer is a must, but hard to find these days. Ours is 12.3 volts output. If yours went out contact : info@watersmacker.com (805)995-4809

We offer a 2 year warranty. Bob Boyce™ the inventor of the WS, says the circuit cannot short and should last indefinitely, but the cheap 12v Chinese wall transformers can go out. The WS only draws 2 watts of energy from the wall socket!! But puts out 8,000 volts (and .000234 amps) of longitudinal (non-hertzian) energy. (static aether that is in abundance all around us. Nikola Tesla
